Connecting to the school wireless .................................................................................... 2
Introduction
The school has wireless access throughout the entire school. The Apple iPads are able to access this wireless connection by following the steps set out below.

Note: Please refer to BYOD User Agreement for the acceptable use of school equipment and the acceptable use on a government network.

The basic summary of the Agreement is that you will do the ‘right’ thing on the school network and not abuse the network or do the wrong thing. If you are unclear on what constitutes doing something wrong, please speak to a staff member (Teacher / HOD / IT Technicians).

Connecting to the school wireless
1. Click on the icon ‘Settings’ which you should find on the homepage of your iPad. Image below.

2. You will be presented with a window that has a large number of preference tabs on the left-hand side of the screen. Scroll till you find the tab called the ‘Wi-Fi’ option on the left-hand side. Highlight it by clicking on it. You should see a screen like the one shown below.

3. Click on the ‘Other…’ Button under the heading ‘Choose a Network’ on the left-hand side of the screen. This will show a dialog box with 2 fields.

   Note: The Wi-Fi screen might have your home network showing which will make it look slightly different. There is no limit to how many networks your device can remember so do not be concerned about adding another.
4. The first field is ‘Name’. This is the wireless network access name. It identifies the school network and allows you to access school data. The details below are for **Albany Creek State High School**:
   - **Name**: QDETA-X
   - **Security**: WPA Enterprise (When you have selected the security option click the ‘< Other Network’ to proceed to the previous screen).
   - **Username**: [Your School Username]
   - **Password**: [Your school Password]

5. Once you have inputted your details it will look similar to the image above.
6. After you have confirmed all your details are accurate click on the ‘Join’ button in the top right.
7. The dialog box will change to show the **Education Queensland** certificate. This is to give your device the right to access this government network. You **Must** click the ‘Accept’ button to get onto the network.

**Note**: If it doesn’t join the network correctly or there is an error, close out and start again. If the problem persists do a restart of the device and then try again.
8. Click on the blue circle with a ‘i’ in it. This is to access the information page about the Wireless connection you have just created.

9. The screen shown below is what you should see on your iPad. It will most likely have a different ‘IP Address’ displayed, however most of the information will be the same.

10. Click on button called ‘Auto’ under the heading HTTP PROXY.

11. If a window pops up asking for you to authenticate use your School login details:
   Username: [School Username]
   Password: [School Password]

12. Click on <Wi-Fi> to take you back to the previous screen.

13. Congratulations you are now on the school network.
